VIANU

WHO DECIDES WITH YOU?

OCCUPATIONAL SAFETY

VIANU makes custom insoles for employees who stand and walk for many hours. The insole sits in the person's own work shoe. It is a comfort offer and replaces no protective measure and no workplace design.

WHAT VIANU PROVIDES FOR YOUR INSPECTION

- [ ] SCOPE

  A complementary comfort offer for work and safety shoes. It replaces no protective measure and no workplace design.

- [ ] DIFFERENCE TO THE MAT

  The insole is with you all day, also between workplaces. An existing anti-fatigue mat can stay.

- [ ] MATERIAL AND HYGIENE

  The insole is made by 3D printing locally in Germany from foamed TPU. The material is biocompatible. It was tested to ISO 10993. In the cytotoxicity test (ISO 10993-5, AITEX), 98.2 to 99.9 percent of the cells stayed alive, grade 0. The skin irritation test (ISO 10993-23, IVAMI) showed no irritant effect, with an irritation index of 0. According to the REACH declaration, no substance on the candidate list is present above 0.1 percent. We send you further details on hygiene in advance on request.

- [ ] DATA HANDLING

  Only VIANU and its manufacturing partners see the photos of the feet. They are used only to make the insole, processed in the EU and deleted afterwards.

- [ ] TEST GROUP AND RISK ASSESSMENT

  You check the pilot scope against your risk assessment (your evaluation of the risks at the workplace) and release the test group on the technical side. Taking part is voluntary.

Next step: Check the pilot scope against the risk assessment and give the test group technical approval. Contact: Roderich Körner-Rehn. Get in touch on the VIANU B2B page.
